***Examiner's Statement of Reasons for Allowance***

1. Claims 23-28 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The prior art made of record fails to anticipate or make obvious the claimed invention. Specifically, the prior art fails to teach, in combination with the remaining elements as recited in claims 23, 27, and 28.

The present invention is directed to a method for beam forming a radio frequency signal radiated from an antenna using a frequency selective surface and maintaining a constant impedance over a wide frequency range in a phased array antenna having a frequency selective surface.

Regarding to claim 23, Prior Arts fail to teach that dynamically changing the composition of a fluidic dielectric within the frequency selective surface to vary at least one among a permittivity and a permeability in order to vary a propagation delay of said radio frequency signal through the frequency selective surface.

Regard to claims 27, and 28, Prior Art fails to teach that that dynamically changing the composition of a fluidic dielectric within the phased array antenna to vary at least one among array parameters selected from the group comprising coupling among elements of the frequency selective surface, resonances of said elements.

Claims 24-26 are allowed for depending on claim 23.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Reineix et al. (US 6456254 B1) teach a reflector forming a parabolic antenna, the reflector being characterized by the fact that it is made up of n layers of dielectric materials.
